

Unspecified

Associated SO term(s)

Unspecified: SO:0000110 Sequence Feature

Recommended Glyph and Alternates

Unspecified is represented by the unicode "replacement character" glyph, indicating a missing or invalid symbol, is RECOMMENDED:

A half-rounded rectangle, the SBGN glyph for a nucleic acid, is an alternative:

For backward compatibility with the prior "User Defined" glyph, Unspecified can also be represented by a plain rectangle suggesting a blank slate to be written upon:

Prototypical Example

An anonymous sequence that is missing any information about its nature or intended purpose.

Notes

The Unspecified glyph is intended for showing where a sequence's role is missing (or, equivalently, given only the uninformative "Sequence Feature" root role). It should never appear with well-curated designs or diagrams.
